DETAILED ACTION

Allowable Subject Matter

1. Claims 1-29 are allowed.
2. The following is an Examiner's statement of reason for allowance: Claims 1-29 are allowed, because the prior art does not disclose all the specific elements recited in claims 1, 13 and 22. In particular, elements involving "assigning a unique process identification number (PID) to a frequency band used by each of a plurality of multimedia content providers; simultaneously receiving a plurality of data segments from the plurality of multimedia content providers, wherein the data segments are tracked using the PID assigned to a frequency band used by each multimedia content provider; reconstructing a multimedia asset package transmitted by the multimedia content provider by compiling the plurality of data segments that constitute the multimedia asset package" are not obvious in the prior art taken with all the other limitations. While the overall method has analogous prior art, including Lee, Dyer et al., Pinder, the details of the method render claims 1, 13 and 22 allowable. Claims 2-12, 14-21, 23-29 are allowed because they depend from claims 1, 13 and 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Pertinent Prior Art

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Headings et al. (U.S. Patent No. 6,925,469) discloses a processor which combines media assets (102) supplied by the media content suppliers and metadata to create a media content offering for use by the consumers. A file repository stores the media content associated with media content offering. A server distributes the media content stored in the file repository (see columns 4-9);

Thomas et al. (U.S. Patent No. 7,305,696) discloses a liaison unit (104) includes a content provider interface, to receive specification of content which is to be input into the audio and video packets and input schedule of the content, from a content provider (102). A transmitter transmits received content that is identified in the specification to a mixing unit (108) according to the specified input schedule (see figs 1-6 and associated descriptions);

Goode (U.S. Patent No. 7,434,242) discloses an apparatus and method for allocating management functions within an interactive information system between service providers and content providers whereby content providers lease respective portions of available resources within the service provider and manage content provided to subscribers from said leased resources (see abstract).
